Does God Play Dice The New Mathematics Of Chaos Ian Stewart
The novel opens with Aunt Polly scouring the house in search of her nephew, Tom Sawyer. She finds him in the closet, discovers that his hands are covered with jam, and prepares to give him a whipping. Tom cries out theatrically, “Look behind you!” and when Aunt Polly turns, Tom escapes over the fence. After Tom is gone, Aunt Polly reflects sadly on Tom’s mischief and how she lets him get away with too much.

Tom comes home at suppertime to find Aunt Polly grumbling about his adventures. During supper, Aunt Polly recalls how Tom had been skipped school that afternoon and went downtown to buy a piece of candy which cost ten cents. She found it in a box of gingerbread. Aunt Polly is satisfied. “Tom has saved the shirt himself to disguise his work.”

Tom goes out of the house into the stifling heat of the summer night. He is tempest-tossed and agitated. Tom and the new arrival of Aunt Polly are in a state of excitement and eventual change. Tom does the necessary work at night and eventually changes the appearance of the whole house.

When he returns home in the evening, Tom finds Aunt Polly waiting for him. She notices his dirtied clothes and resolves to make him work the next day, a Saturday, as punishment.

On Saturday morning, Aunt Polly sends Tom out to whiterush the fence. Jon passes by, and Tom tries to get him to do some of the whitewashing in return for a “white alley,” a kind of marble. Jon almost agrees, but Aunt Polly appears and chases him off, leaving Tom alone with his task.

Tom comes home at suppertime, wildly excited about his adventures. During supper, Aunt Polly tells him that he must not be skipped school that afternoon and must immediately do his schoolwork. Tom’s head droops, and Aunt Polly is satisfied. Tom’s half-brother, Sid, is the butt of Tom’s pranks, and Tom is determined to come up with the best scheme yet.

Tom and the new arrival of the Klondike steamer have chased the newcomers all the way home.

In physics, hidden-variable theories are held by some physicists who argue that the state of a physical system, as formulated by quantum mechanics, does not give a complete description for the system. An example would be that quantum mechanics is ultimately incomplete, and that a complete theory would provide descriptive categories to account for all observable behavior and thus avoid any ...

Pre-revolutionary debates. Einstein was the first physicist to say that Planck's discovery of the quantum would require a rewriting of the laws of physics. To support his point, in 1905 he proposed that light sometimes acts as a particle which he called a light quantum (see photon and wave–particle duality). Bohr was one of the most vocal opponents of the photon idea and did not openly embrace ...
